A little theory (formulas)

↳ • A, B $\dim(A) = \dim(B) = n \times n$

$\Rightarrow A^{-1}, B^{-1} \rightarrow A, B$ are invertible

$\Rightarrow Q$: how do you compute $(A \cdot B)^{-1}$? if you know A^{-1} and B^{-1}

A: $A \cdot B$ is invertible as well

$$(A \cdot B)^{-1} = B^{-1} \cdot A^{-1}$$

multiply inverse
in reverse order

Collanally: $\underbrace{A \cdot A \cdot \dots \cdot A}_{\substack{n \times n \\ k\text{-times}}} = A^k$

$$(A^k)^{-1} = (A^{-1})^k = A^{\text{?}} \cdot A^{\text{?}} \cdot A^{\text{?}} \cdot \dots = A^{\text{?}}$$

Theorem 2

Q: Suppose A , A^{-1} exists

find $(A^T)^{-1} = ?$

$$A: (A^T)^{-1} = \underbrace{(A^{-1})^T}$$
